

NWS Newport/Morehead City Deploys Water Level Gauges at the North Carolina Ferry Terminals

The National Weather Service Office at Newport/Morehead City NC in co-operation with the North Carolina Department of Transportation Ferry Services Division has installed water level measuring gauges at several ferry terminal locations in eastern North Carolina. Water level readings will be provided by NCDOT Ferry Division personnel to forecasters at the Newport Weather Forecast Office during times of unusually high or low water levels in the Pamlico Sound. These water level readings will enhance forecasters' ability to monitor water levels and issue appropriate coastal flood advisories as needed for eastern North Carolina residents in proximity to the Pamlico Sound.
